**Sevethsense Technologies** provides cutting edge IT solutions to Fortune 500 Corporations. Our mission is to enhance the competitive position of our clients by equipping them with state-of-the-art IT solutions and continuously providing them with value-added services and support.

Sevethsense Technologies is a niche service provider in business software, serving many customers worldwide with deployment of solutions in more than 900 locations. These customers include both large enterprises and midsize companies. Along the way, Sevethsense Technologies has accumulated a unique knowledge base of best business practices, including both cross-industry and industry specific practices that are used in the solutions. The Sevethsense Technologies tradition of leadership continues with a new generation of software that gives your company unprecedented speed and flexibility to improve your bottom line by improving planning across your enterprise.

## INDUSTRY PAIN POINTS:

- Tracking of Sales by Outlet, by Shift, by Counter, by Sales Agents, etc.
- Ability to maintain Sale Price for an Item by Sale Type
- Data synchronization between Outlet and Central System either Online or End of Day upload
- Pricing update to all shops from the Head/Central Office
- Visibility of Stock at Central Office and Outlets
- Work-flow of Items request and Supply between Outlet and Central System
- Multiple Form of Payment – Cash, Credit Card, Voucher, etc.

## OVERVIEW OF PURLYNT RESTAURANT POS SOLUTION:

Purlynt Restaurant POS solution is an end-to-end operations system specifically designed in alignment with Restaurant processes covering Procurement, Supply Chain and Sales Processes. The Restaurant POS is available both as a Desktop and hub-and-spoke deployment. When deployed centrally with outlets connected through web-access, it supports synchronization of Outlet data with Central Office. The key features available in Purlynt Restaurant POS system can be summarized into the following distinct Restaurant POS Enablement processes:

**ITEM & PRICING CONFIGURATION:** Each product/food item is defined as an item and sale price can be defined at the Central Location. Item pricing module will have facility to define the sales price at each item level and for each location or combination of locations. This definition is done at the Central Location and is synchronized with each Outlet level POS module. Item pricing can be updated through central and desktop system.

**STOCK TRANSFER:** Items required at the outlets are captured through Item request screen at the outlet level which goes as request to Central Stores/Kitchen. Items are issued against the Requests and link is maintained in the Warehouse/Stores Module at the Central location. Receipt screen at the outlet level helps to capture the information of received items which automatically updates the stock at the location.

**ORDER PROCESS & SALES:** Customer ordered item details are captured through order form in Palm Top which will get generated as a KOT to kitchen for supply. Kitchen delivers product/ menu to the Table/Customer based on the KOT. After completion of an order, it moves to pending sales receipt. Cashier prints the sales receipt and Payment for the sales can be received by Cash or Card or Voucher or can be complimentary. Fast Service (**Take away**) can be processed using quick sale functionality of POS.

**DATA SYNCHRONIZATION:** In those locations where there is a bandwidth or connectivity issue, there will be a facility to store the transaction data for the day and the same can be integrated with Central Instance on a daily basis at the end of the day operation. It can be automated through schedule process. Integration with the Central Instance at a high level happens on the following:

- Receipt of items in POS against delivery from Distribution Centre.
- Sales & Sales return details.
- Finished goods with price details

**STORE CLOSING:** System supports to close the sales at each shift or for the day. If there is a requirement for both the options, it is possible to enable.

## KEY FEATURES

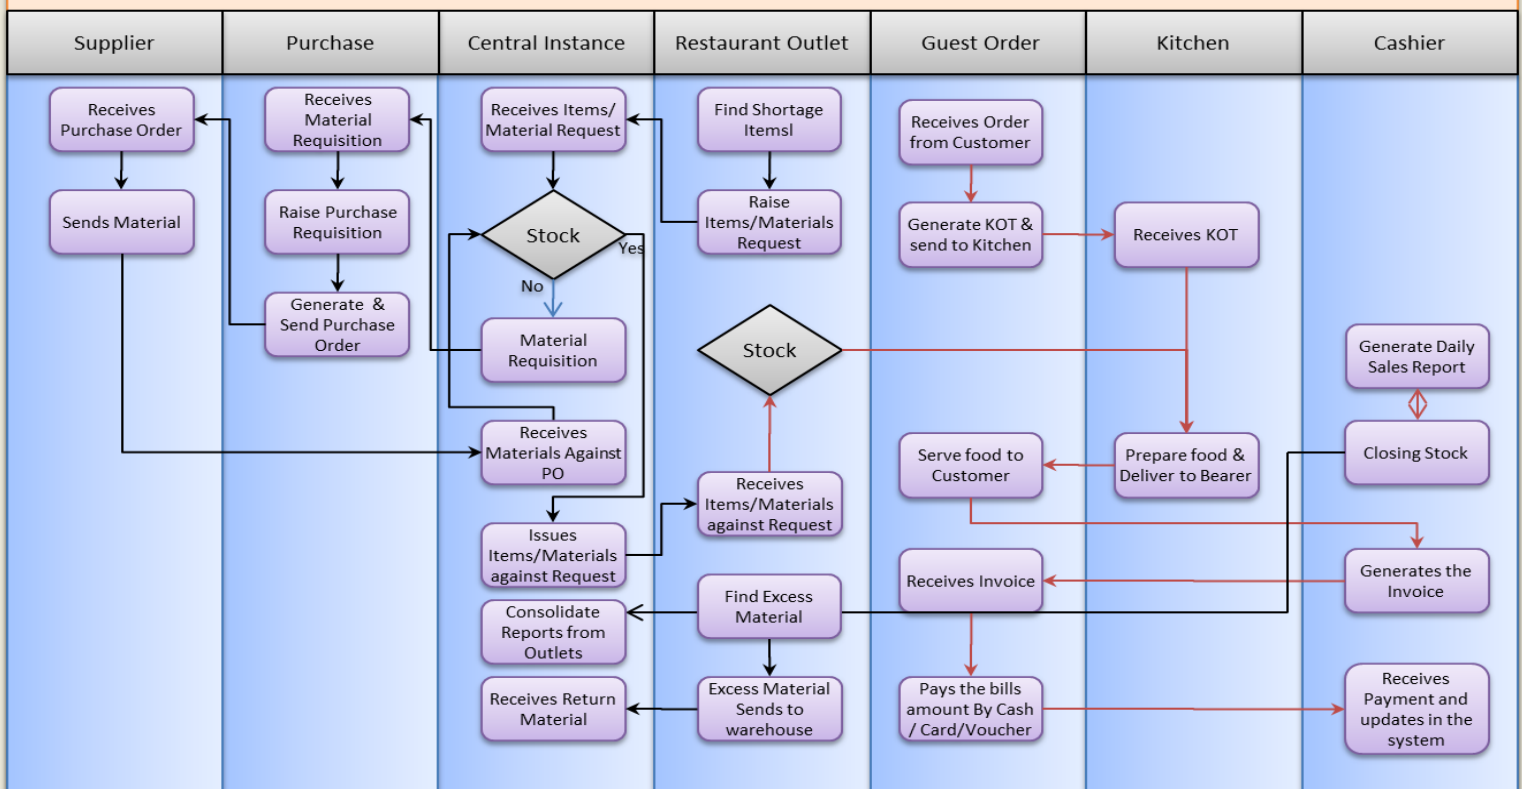

The Purlynt POS offers features that are in alignment to the Retail Operations and Point of sale processes with ease and convenience.

- An integrated system-enabling user to access various functions based on rights.
- User screen access rights can be controlled through user privilege setup. Rights can restrict up to action level like Write / Update / View the record.
- Facilitates to find category and sub category of item through item number.
- Facilitates to add special menus for special events like New Year's Eve or big parties.
- Facilitates to update sales using bar code or manual operation using touch screen system.
- Facilitates to capture covers, guest name thus giving the kitchen full information of the order as per client's specifications.
- Facilitates to track the pending KOT in kitchen
- Having an option to view the sales by sales type.
- Facilitates to generate invoice based on the KOT of the table.
- Facilitates to cancel / reorder the Order items.
- Helps to merge invoices of multiple tables.
- Helps to split single invoice in to multiple.
- Facilitates to capture sales return.
- Easy to track the pending bills.
- Bills can be settled through Cash, Card, and Vouchers as well as multiple currency and multiple credit cards.
- Facilitates to recall the hold sales.
- Different item pricing can be done for Dine in, Delivery, and parcel orders of single item.
- Helps to map group of employee with special discount pricing of product.
- Facilitates to closing the store by automatic at end of the day on scheduled timings
- Sample Report Types: Sales Trend; Cash and Card payments summary; Store Wise, Shift Wise, Stock Wise, Sales Agent Wise and Consolidated Daily sales summary (DSR); Sales Analysis report; Product category based sales summary; Daily and Shift Wise Stock Summary, Pending Bills report, KOT Detailed, Statistical reports etc.,

## Restaurant POS Process Flow

Purlynt Restaurant POS module integrates a complete retail sales process starting from item creation to till Sales & Payment receipt. Customer ordered product/ menu details are captured through order form in palm top and same will be generated as a KOT to kitchen for supply. Kitchen delivers product/ menu to the Table/Customer based on the KOT. After completion of an order, it moves to pending sales receipt. Cashier prints the sales receipt and Payment for the sales can be received by Cash or Card or Voucher or can be complimentary. For pre-packed bar-coded items where Customer picks up from the racks and goes to sales counter with purchase item for billing, Cashier can scan all purchase items using barcode reader and generates total price for the transaction. Customer pays cost of transaction by cash / Card / and Voucher. Cashier enters amount received from customer to the system, it indicates total has been paid after that cashier prints the receipt of transaction and hands over receipt to customer. In hub-n-spoke operations where the items are made in Central Kitchen and delivered to Outlets, the complete request to supply to closing stock process is built in.
